A pool cue can be the perfect gift for a novice pool player and for an aficionado. You probably would not want to get a pool cue for a very fervent or expert player because they'll like to buy their own or have a customized pool cue.

When buying a pool cue there are a few things to take into account. If the individual you will be purchasing a pool cue for is a beginner or novice you need to ensure that you get them a resilient pool cue. Sturdiness is particularly significant if you have concerns that they may be a little forcible with the cue (for example when they hit a bad shot).

Also, let's face it, they'll want to look good while playing pool so a handsome pool cue can make them feel a bit better about their game. You'll observe that there are numerous ranges of inlays and craftsmanship to consider. The look may not be your main focus but do not lose sight of its importance.

Pool Cue - The Materials

You will want to know the material the pool cue is made of. The harder the material used for the pool cue the greater energy there'll be in the shot. Softer materials grant enhanced direction.

The 2 primary materials used for a pool cue are fiberglass/graphite and naturally, wood. Wood is the pool cue of choice for serious and avid pool players. Wood can warp and involve preservation so several novice and introductory players choose a fiberglass or graphite pool cue. Remember, if they play in tournaments their pool cue will have to be approved and not all are.

The weight of the pool cue is also crucial. A pool cue will weigh between eighteen and 21 ounces. Some pool players like a heavier cue while others like a lighter cue, much like baseball players with bats. Pool cues occasionally have detachable weight bolts for people who prefer different weights of cues for breaking versus playing, etc.

Pool Cue - The Sections

There are 2 focal components of a pool cue - the butt and the shaft. The butt is the bottom segment and is heavier than the shaft. The shaft is the tapered end that ends with a tip. The joint between the 2 is thought to be vital. The material used in the joint and the girth of it is going to influence how the cue "plays". If they are a amateur chances are you'll want a wider joint since they are a bit more durable.

The grip of a pool cue is also a factor that ought to be considered. If the individual happens to sweat a lot, get a leather-wrapped handle. If not, you are able to think about a nylon or wood grip. When it comes to the tip a leather-based tip normally creates a little more control which is important for someone who wants to have maximum manipulation of the ball.

Obviously the price of the pool cue is an important consideration. If you are going to be purchasing a pool cue as a present it is best to buy the best cue within your budget. Take into account the factors outlined above and you ought to buy a pool cue that the recipient will be delighted with.
